### EXPERIENCE

---

#### Journii | journiiapp.com

Co-Founder

Jun 2026 – Current

- Architected and developed core software for 2 applications (Next.js web, Expo mobile), establishing monorepo structure, CI/CD, and Cloudflare deployment.
- Developed and implemented an internal GitHub package system, centralizing UI components, types, and themes for reuse across all applications.

#### Rosepetal

Barcelona, Spain

Software Engineer Intern

Apr 2024 – Jan 2025

- Increased dataset labeling efficiency by 35%, as measured by the labeling team, by building a solo Python integration of Meta's Segment Anything Model into the internal labeling editor.
- Selected Segment Anything Model over 2 competing models after independent research and testing; the integration is still used company-wide across all datasets more than a year later.
- Designed and built the card components and routing for a client dashboard used by 15+ clients managing 120+ datasets, owning the Figma design within a 3-person team over 4 months.

### EDUCATION

---

#### Universitat Politècnica de Catalunya (UPC), FIB

Barcelona, Spain

Bachelor of Engineering in Computer Science

Sept 2021 – Jan 2026

- Thesis: AiGile 2.0 – 8.3/10
- Relevant Coursework: Software Architecture, Database Design, Web Applications and Services

#### Universitetet i Bergen (UiB)

Bergen, Norway

Erasmus Exchange Semester

Jan 2025 – Jun 2025

- Relevant Coursework: Machine Learning, Web Science

### PROJECTS

---

#### Dici, AI Italian Language Tutor | github.com/bartzanen/dici | dici-frontend.vercel.app

- Fine-tuned a Qwen 3.5 4B model with LoRA on a custom dataset of 1,000+ tutor-student Q&A rows to match a target teaching tone.
- Built and deployed an interface using Next.js to be able to interact with the model, including daily challenges, flashcards, and progression stats.

#### AiGile 2.0, AI Agile-Methodology Teaching Platform (Bachelor's Thesis)

- Developed solo over one semester: AI-orchestrated simulations that adapted to student-submitted startup ideas across 4 scenario types, plus a custom scenario builder for instructors.
- Built using Django, PostgreSQL, the OpenAI API, and Docker to orchestrate real-time agile simulations.

#### Pulmón Urbano, Clean-Air Route Planner (Team Project)

- Led a 4-person team building a mobile app combining live air-quality data with route planning; owned the software architecture and the OSRM routing integration connected to Barcelona's open air-quality API.

### TECHNICAL SKILLS

---

Languages: TypeScript, Python, JavaScript

Frameworks and Libraries: Next.js, React Native/Expo, Node, Django, FastAPI, Vue.js, LangGraph, CrewAI

Data and ML: TensorFlow/Keras, Hugging Face, MLX, Segment Anything Model (SAM), RAG, PyTorch

Infrastructure: Supabase, PostgreSQL, Docker, Cloudflare, GitHub Actions, AWS, OSRM

Tools: Claude Code, Git, Figma, Notion, Postman

Spoken Languages: English (Native), Dutch (Native), Spanish (Native), Catalan (Native), Italian (Intermediate)

### CERTIFICATIONS

---

- Building AI Agents and Agentic Workflows (Specialization), IBM
- Advanced Deep Learning Specialist, IBM
- Fundamentals of Building AI Agents, IBM
